Summary

Overall I have 10+ years experience with vanilla javascript, ecmaScript (ES6+) The past 2.5 years I've worked with vue.js and built complex progressive web apps, page/survey/campaign builders.

* Looking for the next Vue.js long-term full-time project

* 100% remote only

Building highly scalable and maintainable SaaS projects comes fairly easy to me. My latest 2 year contract job was for Kartra where I've made cutting edge website builders, similar to those on Wix, SquareSpace using vue.js.

Also, checkout these cool projects from my github:

Learning to code using nodes/edges

I'm also an Udemy instructor, with 9 available javascript frontend courses, with over 6000 - <https://www.udemy.com/user/tudor-todorescu/>

♥# I've also held a FREE coding bootcamp to help the frontend dev community - <https://www.youtube.com/channel/UCjEXIBdFQxikVtHTSvSksVw>

Experience

Vue.js - Senior Frontend Developer (2+ years)

Genesis Digital, LLC

Mar 2020 - May 2022 (2 years 3 months)

Using vue.js I've built complex/scalable frontend infrastructure for the survey/quiz builders.

Find out more about this SaaS: <https://www.kartra.com> (the all-in-one marketing solution)

See a demo here: <https://www.youtube.com/watch?v=ZOOcJ1jkbdY>

Angular - Senior Frontend Developer (6+ years)

Self Employeed

Jan 2014 - Mar 2020 (6 years 3 months)

Angular expert, any type of small/medium/big UI/UX project I can make from A-Z fully custom according to specs.

Included with API integration and some necessary backend functionalities. Watch a video demonstration of one of my completed Angular projects below

Angular Project Example #1:

<https://www.youtube.com/watch?v=CvLuCqAX4nk>

Angular Project Example #2:

<https://www.youtube.com/watch?v=Bde6ZZhsg0E>

Angular Project Example #3:

<https://www.youtube.com/watch?v=edLrNI5T2bU>

PROGRAMMING LANGUAGES:

JavaScript (8 years)

Angular (6 years)

TECH-STACK:

✓# Angular 8+

✓# TypeScript

✓# ES6 (ES2015)

✓# OOP & Design Patterns

✓# RXJS operators & NGXS state management

✓# API Communication JSON/XML, JWT

Angular - Senior Frontend Developer (< 6 months)

Kronsoft Development

Jul 2019 - Nov 2019 (5 months)

Due to signed NDA, this is the most I can disclose about this project. I worked mainly on the existing frontend architecture built using angular framework, with integration to java backend API. Worked on the creation of invoices and the prescriptions module, the editing, and list with comprehensive UI based on adobe xd design. More details and screen-recording can be viewed on the youtube demo. I explain there deeper detail.

Video Demo - <https://www.youtube.com/watch?v=CvLuCqAX4nk>

Angular - Bootstrapped SaaS startup (6+ months)

Lucrător independent

Jun 2018 - Dec 2018 (7 months)

As I started to get some lead generation, appointment setting clients using advertising, I've built a SaaS that doctors use to fill-up their clinics with new patients.

This was a really exciting project since I was pretty much doing everything, from the building, to handling clients, to doing the facebook advertising. I'm personally surprised of how good of an Angular project it turned out to be.

Feel free to see the full demonstration and explanation as I share my screen in the below video.

Project Demo - <https://www.youtube.com/watch?v=Bde6ZZhsg0E>

Angular - Senior Frontend Developer (< 6 months)

ArtSoft Consult

Jan 2017 - Jun 2017 (6 months)

Responsible of building apps for various international clients. Worked a bit with polymer, then with angular, html, css, building highly rich dashboards for apps with fully functional features.

Angular - Senior Frontend Developer (1+ years)

Upwork

Jan 2016 - Jan 2017 (1 year 1 month)

Freelancer UpWork -- <https://www.upwork.com/fl/tudor>

Freelancer angular.js for various startups from Norway, United Kingdom and United States. Exmample of projects I've worked on:

RunRepeat - <http://www.runrepeat.com>

Client Testimonial: "I chose to work with Tudor after 4 interview rounds and a total of 50+ candidates, and I didn't regret my choice. Tudor is a very skilled frontend developer, and I'd be happy to work with him again."

One Utility Bill - <https://www.oneutilitybill.co>

Client wanted to build a web-app based on zeplin.io and invisio-app design specifications. We used angular-material design for the framework with custom made sass stylesheet rules.

All of the front-end architecture, the design was made from zero, used require.js for loading components and dependencies. Server made using node.js. Used google-maps-API for localization of properties.

Client testimonial: "It has been great working with Tudor. He is a fast and dependable developer. The app has been built to the specification and we will make our launch date with time to spare. We will be working with Tudor again in the near future. Thank you!"

Property Technology - <http://apply.property>

Developed front-end pages by design in zeplin.io. Technologies use angular.js, coffeescript and haml. Also wrote unit-testing for the modules.

Client testimonial: "Excellent person to work with, highly recommended!!"

Angular.js - Senior Frontend Developer (1+ years)

Paws LLC Florida (United states)

May 2014 - Jun 2015 (1 year 2 months)

This is a startup project to implement on the web a software that handles daycare, grooming, and other pet related activities. Initially, I've got inspired to a similar software that was just desktop version, to understand the workflow and business model.

Slowly but steady I've managed to get an understanding of it and reproduce similar architecture, but using web technologies such as angular.js for the client side. The project became more complex, had to recreate more solid architecture, all of this on my own learned how to cope with new challenging situations and eventually come up with a brilliant product.

Video Demo - <https://www.youtube.com/watch?v=edLrNI5T2bU>

JavaScript - Medium Frontend Developer (< 2 years)

Nordlogic Software

Dec 2012 - Apr 2014 (1 year 5 months)

Nordlogic, Cluj Napoca (Romania)

www.nordlogic.com

Although I was pretty much the new guy all the time, I did my best to learn and become better and better stealing work ethics from the better guys, by the end of the contract I become really good at web development and this was my first home.

From here I got the confidence needed to try finding my own projects. By the beginning of 2014 I got my first clients from odesk (currently upwork).

My first ever project an exchange website for an UK client, earning my first solo 1000 \$, that's when I decided to become a freelancer and get a long term project to grow even further.

JavaScript - Junior Web Developer (< 6 months)

Internet Objects

Aug 2012 - Dec 2012 (5 months)

Internet Objects, Cluj Napoca (Romania) www.resto-in.fr

Here I had my first job working as a web developer for a growing business that provided services for clients and restaurants in the food industry. Was really exciting project since I've just moved to a bigger city, started living on my own and learned how to take on more responsibilities.

The projects I had with my own company we're actually small, but with this I had the opportunity to develop a big object-oriented project which included both server-side as well as client-side.

This was the first time I really felt how it actually is to work with a team together, to plan work together and attack real targets. Our french clients we're demanding, expecting top quality work from us which we gladly delivered, took big pride in our work, and the results can be seen even today since the business is still running and having huge success.

Web Designer / Web development (3+ years)

KMTEL

Jun 2009 - Jul 2012 (3 years 2 months)

As I've switched my studies from telecommunications from UT Cluj to "1 Decembrie 1918" Alba Iulia – Computer science, having a passion for software I started to self-teach myself how to code websites. As most of us know how college is, the first 2 years I mostly did it as a hobby, passion and built a few websites here and there for family and friends.

I've even made a few websites as starter-packages. I managed to accumulate enough experience to land me a web developer job in Cluj and start progressing on my career.

Education

Universitatea „1 Decembrie 1918” din Alba Iulia

Bachelor's degree, Computer Science

2009 - 2012

Skills

Vue.js • Vuex • vue • Software as a Service (SaaS) • SaaS Development • TypeScript • ECMAScript • Shopify • Angular • Angular Material
